1

First, remove existing electrical, trim, frame brackets, and tow hooks, if applicable. Your rear bumper should look like ours.

2

Next, install your flush mount reverse/brake lights into the bumper per the manufacturer's instruction.

3

Position the bumper so that the mounting posts are on the outside of the frame. Align the mounting holes to the frame and insert the factory bolts. Fully secure the bolts.

4

Once factory bolts are tight and secure, refer to your flush mount light manufacturer's installation literature for the proper wiring technique.
